

Health control plan workshops

All mines, quarries and petroleum sites are required to develop and implement a health control plan. To assist mines with this, the Resources Regulator will be delivering workshops across NSW.

Mines that are just starting the process and are not sure where to begin, the 'Develop and implement a health control plan workshop' has been designed to assist you on the journey.

Mines that have already implemented a health control plan or who are looking to bring their health management plan in-line with current legislative requirements, may find the 'Evaluate and review a health control plan workshop' of assistance.

Please register your interest in attending, including the location and number of attendees, at minesafety.seminars@industry.nsw.gov.au.

Further workshops will be scheduled in 2018 in other regions.
